PLANNING DIVISION
RECOMMENDATION and DECISION

Project: Hoffman Hill Water Treatment Plant

File Numbers: PLNG2022-026 (Site Plan Review)
PLNG2022-034 (SEPA)

Date of Report: April 19, 2023

From: Lisa Klein, AHBL (planning consultant to the city)

SUMMARY OF REQUEST: City approval for Type II Site Plan Review.

PROJECT DESCRIPTION: The proposal is for the approval of the Hoffman Hill PFAS Water Treatment Facility to be located on a 1.77-acre site in the Residential-4 (R-4) district. The existing site includes Hoffman Hill reservoir, Well 1, a booster station, and a cell tower. The proposed development includes a 1,778 square foot foundation concrete pad, three sets of two, 12-foot-tall carbon treatment vessels, 114 linear feet of a 3-foot-tall retaining wall, an on-site chlorine generator, and site piping changes.

LOCATION: XXX Lapsley Dr, an access road at the intersection of Forman Road and Packwood Avenue. Tax Parcel 0119331004, in Section 33 Township 19 Range 01.

APPLICANT:
City of Dupont
1700 Civic Drive
DuPont, WA 98327

CITY CONTACT:
Barb Kincaid, AICP
Community Development Director
City of DuPont

DuPont, WA 98327
Phone: (253) 912-5393
bkincaid@dupontwa.gov

SUMMARY OF RECOMMENDATION: Staff recommends approval of the Type II Site Plan Review, subject to conditions listed in Section I.

A. SUMMARY OF RECORD:

See the list of attachments provided in Section L, which includes the submittal plans and documents received for processing the application and comments received on the application during the city review process (Attachments 1-3).

B. FINDINGS OF FACT

1. Proposal and Property Details

- (a) The proposed project is in the Residential 4 (R-4) zoning district and the Hoffman Hill Village subarea. The City's Comprehensive Plan Land Use Map designates the site's future land use as R-4.
- (b) Adjacent land uses include:

North: Single Family Residential
East: Single Family Residential
South: Single Family Residential
West: Single Family Residential

2. Procedural Requirements

- a. A Notice of Complete Application was issued March 3, 2023. (Attachment 3a).
- b. A Notice of Application and Optional DNS was issued on March 8, 2023. The notice was published in the News Tribune and posted at City Hall. The site was posted on March 21, 2023. Due to the delay in posting, the comment period was extended to April 5, 2023. The comment extension was posted at City Hall and on the site. Affidavits are provided. No comments were received. (Attachment 3b).
- c. State Environmental Policy Act (SEPA) review (PLNG2022-025). City staff has reviewed the proposal using the optional DNS process in WAC 197-11-355. Agencies, tribes, and the public were encouraged to review and comment on the proposed projects and its probable environmental impacts during the comment period from March 21, 2023 through April 5, 2023. No comments were received. On April 21, 2023, the City is issuing a SEPA Mitigated Determination of Nonsignificance (MDNS) concurrent with this Decision (Attachment 3c). The end of the appeal period is May 5, 2023.
- d. Per DMC 25.150.030, in order to obtain site plan approval, all of the development regulations and criteria specified in the district applicable to the property in addition to any general development requirements stated in Chapter 25.75 through 25.95 and 25.105 through 25.125 DMC. must be satisfied. Additionally, the request must fully comply with the general goals, vision, and policies established in the comprehensive plan with specific focus on the applicable Village/Planning Area in which it is located. This Report provides staff analysis of compliance with all site plan approval requirements.

CONSISTENCY WITH CITY OF DUPONT COMPREHENSIVE PLAN

DMC Chapter 25.175.040, Consistency with Development Regulations, requires evaluation of the proposal's consistency with the city's Comprehensive Plan.

The subject property is in the Hoffman Hill Village planning area which is described in the Comprehensive Plan as follows:

The Hoffman Hill Village is adjacent to the Nisqually Delta and Reach. The design intent of the Village is to minimize the impacts of development on these nearby natural areas. Within this Village, selected bands of trees are integrated into the design of the neighborhood to provide a natural amenity for the residents. In addition to tree stands within the neighborhoods, a large natural buffer is maintained along the slope of the Puget Sound bluff. Approximately 69 acres along the slope of the bluff within Hoffman Hill Village are undevelopable and will preserve the visual character of the Nisqually Delta...Approximately one-third of the multifamily development projected for Hoffman Hill Village is planned for the north edge of the village, while the balance of the multiple family residences will be disbursed throughout the Village with no more than 40 units in any one location.

The City's Comprehensive Plan describes the Residential-4 (R-4) zoning as follows:

The purpose of the R-4 district is to implement the single-family land uses where single-family density averages four units per gross acre. This district is appropriate for Hoffman Hill Village and Sequalitchew Village. (Page 30)

The following goals and policies support the proposal:

1. Land Use Goals and Policies:

a. **LU-3.6:** Employ practices that protect the long-term integrity of the natural environment, adjacent land uses, and the long term productivity of resource lands.

Staff Analysis and Conclusion: The proposed improvements are located outside critical areas and implement temporary erosion and sedimentation controls to ensure the integrity of the natural environment. The proposed use will be the same as the current use of the site (public works facilities) and is compatible with the vision for the R-4 zoning district and the Hoffman Hill Village subarea.

2. Natural Environment Goals and Policies:

a. **NE-1.1:** Preserve environmentally sensitive areas and those that are valuable natural and aesthetic resources to the City.

Staff Analysis and Conclusion: There are no environmentally sensitive areas within the proposed work area.

b. **NE 4.1:** Ensure all development meets or exceeds applicable federal, state, regional, and local air quality standards.

Staff Analysis and Conclusion: The project will implement applicable US Environmental Protection Agency, Washington State Department of Ecology and Puget Sound Clean Air Agency standards and requirements governing air quality with construction of the treatment systems.

- c. **NE 4.3** Site preparation activities should be designed to minimize extensive grading and to retain a portion of significant trees and vegetation. Development standards should implement guidelines and define extensive grading to clarify the circumstances when extensive grading may be appropriate.

Staff Analysis and Conclusion: All trees within the project limits and on-site will be retained. A temporary erosion and sedimentation control plan was prepared to City standards to ensure that construction and site preparation activities are following best management practices.

- d. **NE 4.4:** Address light pollution through performance standards within development regulations that promote reduction of light emissions and encourage the use of efficient light sources.

Staff Analysis and Conclusion: The project does not propose any light impacts, as the painting of the carbon vessels will minimize any glare and efficient light sources will be utilized.

The project is consistent with the Natural Environment Chapter of the Comprehensive Plan.

3. Capital Facilities and Utilities Goals and Policies:

- a. **CF-1.3:** Require projects that demand large amounts of water to demonstrate that their use will not increase costs, degrade water quality or system dependability to existing and future users.

Staff Analysis and Conclusion: The proposal will not utilize water but will result in an improvement of water quality for DuPont citizens.

- b. **CF-1.8:** Collaborate with regional and neighboring public safety services providers to ensure adequate emergency response preparedness.

Staff Analysis and Conclusion: The project will not result in an increased need for public safety services.

- c. **CF-1.10:** Water, wastewater and storm drainage lines are to be developed within public rights-of-way.

Staff Analysis and Conclusion: The proposal is not located within public right of way but is located on public property.

- d. **CF-1.11:** Coordinate with utility providers at early stages in planning for needed facilities: 1) The City shall require that utility providers use the Land Use Element of this Plan in planning future facilities; 2) The City should continue to use and adopt procedures to review and comment on proposed actions and policies of public and private utility providers; and 3) City coordination may include involvement in consideration of alternatives to new facilities and alternate locations for new facilities.

Staff Analysis and Conclusion: The Comprehensive Plan Future Land Use Map designates the site as Residential-4. The use aligns with the allowed uses in this zoning designation. Additionally, the proposed use is consistent with the current use of the property.

- e. **CF-1.13:** Provide an efficient and adequate water supply to the residents and businesses of the City.

Staff Analysis and Conclusion: The proposal will augment the city's existing water supply facilities by providing a new water treatment facility.

- f. **CF-3.1:** Promote conservation of energy, water and other natural resources in the location and design of public facilities.

Staff Analysis and Conclusion: The proposal will utilize energy at the site to operate chlorine generators and related equipment. The project will comply with all state energy code requirements.

- g. **CF-3.2:** Practice efficient and environmentally responsible maintenance and operating procedures.

Staff Analysis and Conclusion: The proposal is an efficient means/method for water treatment.

- h. **CF-6.3:** Ensure that plans consider the best available lifecycle cost of an improvement, including operation and maintenance costs, environmental economic and social impacts, and any replacement or closure costs.

Staff Analysis and Conclusion: In consideration of lifecycle costs, the City received a grant from Dept. of Ecology to purchase and install the proposed water treatment facility.

- i. **CF-6.3:** Public facilities shall be located to protect natural areas.

Staff Analysis and Conclusion: There are no critical areas on site and the proposal is located in an area that is already developed with City water facilities.

- j. **CF-6.7:** Encourage additions to and improvements of utility facilities in conduits, shared corridors and trenches to reduce costs, minimize the amount of land allocated for this purpose, and to minimize construction disturbances.

Staff Analysis and Conclusion: The proposal is an addition to an existing water facility.

- k. **CF-6.8:** Minimize adverse environmental, aesthetic, and fiscal impacts associated with the siting, development, and operation of utility services and facilities

Staff Analysis and Conclusion: The proposal as conditioned will minimize environmental and aesthetic impacts. Disturbed areas will be hydroseeded and no existing significant or landmark trees will be removed.

- l. **CF-9.9:** Preserve existing significant natural vegetation and features in the development of public facilities

Staff Analysis and Conclusion: The proposed project will retain existing significant trees within the site.

m. **CF-9.10:** To facilitate the development and maintenance of all utilities at levels that ensure adequacy to meet DuPont's projected population and employment growth.

Staff Analysis and Conclusion: The proposal is intended to improve water quality for DuPont's projected population and employment growth.

n. **CF-9.11:** To ensure provision of reliable utility services in a manner that balances the public concerns over safety and health impacts of utility systems; consumers' interest in paying no more than a reasonable price for utilities' products and services; DuPont's natural environment and the impacts that utility development may have on it; and the community's desire that utility projects be aesthetically compatible with surrounding land uses.

Staff Analysis and Conclusion: The proposal seeks to improve public health through enhanced water treatment. The review process allowed for a period of public comment opportunities to ensure public concerns were considered, no public comments were received. The project will adhere to the City's bulk regulations for the R-4 zoning district. No impacts are proposed to the natural environment. The SEPA Environmental Review process has considered aesthetics in its findings and mitigation measures.

The project is consistent with the Capital Facilities and Utilities Chapter of the Comprehensive Plan.

ANALYSIS AND CONCLUSIONS OF CONSISTENCY WITH DEVELOPMENT REGULATIONS FOR SITE PLAN REVIEW

DMC 25.150 Site Plans describes the purpose, procedure and review criteria for Site Plan approval. It states that Site Plan review shall be processed as a Type II procedure because the project does not fall within any of the exemption categories. DMC 25.150 requires that, in order to obtain approval, all of the development regulations and criteria specified in the district applicable to the property must be satisfied in addition to any general development requirements stated in Chapters 25.75 through 25.95 and 25.105 through 25.125 DMC. This Section provides the required consistency analyses.

The following provides a description and analysis of applicable regulations under the DMC Title 25 Land Use Code.

1. DMC Chapter 25.20 Residential Districts

The subject property is within the Residential 4 (R-4) zoning district.

a. **Conditional Uses – DMC 25.20.030(2):** Above-ground utility and communication structures over 50 square feet in area or 7.5 feet in height, such as electrical substations;

Staff Analysis and Conclusion: The proposal consists of 12-foot-tall carbon vessels. Per DMC 25.20.030, the proposed use is a conditional use in the R-4 zoning district. The site contains existing City water tank and utility facilities that were approved previously as a conditional use, therefore a new conditional use permit is not required.

b. **Maximum Building Height – DMC 25.20.040 (1):** Thirty-five feet for principal building, except in the Historic Village.

Staff Analysis and Conclusion: The proposed height for the carbon vessels is 12 feet. The proposal is compliant.

Minimum Front Yard Setback – DMC 25.20.040 (2): Either 20 feet or 16 feet provided the principal building on the adjacent lot is set back in excess of two feet to effect a variety of setbacks within the block.

Staff Analysis and Conclusion: The parcel is irregularly shaped. The front yard setback is assumed to be 20 feet for the proposed use. The front yard is the portion of the parcel that obtains access from Foreman Road and the setback distances vary due to the irregular shape. In all cases the front setback exceeds 20 feet. The proposal is compliant.

- c. **Minimum Rear Yard Setback – DMC 25.20.040 (3):** Fifteen feet with exception, none of which are applicable.

Staff Analysis and Conclusion: The parcel is irregularly shaped. The rear yard is the portion of the lot between the principal building and the rear property line. The rear property line is the property line that is farther from and essentially parallel to the front property line. A 15-foot setback is noted on the plan behind the reservoir, wellhouse and booster station. The proposal is compliant.

- d. **Minimum Side Yard Setback - DMC 25.20.040 (4):** For Hoffman Hill Village the minimum side yard setbacks depend on lot width, the following minimums shall apply: Non corner lots over 80 feet: 5 feet and the 2 sides must total 20 feet

Staff Analysis and Conclusion: The site is over 80 feet in width, and therefore requires 5 foot setbacks on each side and the two sides must total 20 feet. Side yards are all yards that are not front or rear yards. At least 15 feet of setbacks are depicted on the plan. The proposal is compliant.

- e. **Lot Coverage – DMC 25.20.040 (5):** For Hoffman Hill Village the maximum lot coverage on lots over 60 feet wide is 35 percent.

Staff Analysis and Conclusion: The proposed lot coverage is 30.5%. The proposal is compliant.

- f. **Fences - DMC 25.20.040 (6):**

(a) No fence shall exceed six feet in height, except that the city may, in the conditional use permit process, allow fences up to eight feet tall around utility and government facilities.

(b) No fence shall be allowed in the front setback area.

Staff Analysis and Conclusion: No new fencing is being proposed with this project. The proposal is compliant.

- g. **Common Maintenance - DMC 25.20.040(7):** In any instance where the combined areas of the fee title lots is less than the area of the parent lot, the remaining area shall be

governed and maintained through a common maintenance agreement among all of the fee title lot owners. Said agreement shall be reviewed and approved by the city as to form.

Staff Analysis and Conclusion: The project does not propose combining lots, therefore DMC 25.20.040(7) is not applicable.

2. DMC 25.75 Commute Trip Reduction

Commute Trip Reduction (CTR) is applicable to new businesses that employ more than 100 persons.

Staff Analysis and conclusion: The proposal is a city facility and the city has a CTR program in place. The proposal is compliant.

3. DMC 25.80 Cultural, Historical and Archaeological Resources

Chapter 25.80 regulates construction within areas of potential historical or cultural resources and allows conditions to be imposed on any plat, site plan or permit to assure that such resources are protected, preserved, or collected.

Staff Analysis: The property is not located within the vicinity of a designated cultural resource site. See the SEPA Determination for applicable mitigation measures pertaining to the protection of cultural, historical, and archaeological resources (Attachment 3c). The proposal is compliant.

4. DMC 25.85 Affordable Housing Incentives Program

Chapter 25.85 provides incentives for affordable housing.

Staff Analysis and Conclusion: Affordable housing is not a component of this proposal; therefore, Chapter 25.85 is not applicable.

5. DMC 25.90 Landscaping

a. DMC 25.90.020 Substantive requirements – Proportion of landscape areas

(2) The minimum portion which must be a landscape area is assumed to be 30 percent for property located in the R-4 zoning district.

Staff Analysis and Conclusion: The provided landscape plan shows a landscaped area of 48.8%, exceeding the R-4 zoning district minimum of 30% landscaped area. Therefore, the proposal is compliant.

b. DMC 25.90.030 Substantive requirements – Landscaping

(1) Street Trees. At time of street construction, or time of development of the adjoining land, street trees and related landscaping shall be provided in medians and parking strips within the right-of-way in accordance with the city's public works standards. Street trees shall be:

- (a) Provided at least one per 40 to 50 feet of frontage, depending on the tree species and other circumstances;
- (b) Located within the street right-of-way;
- (c) Of the same species as other street trees in the same streetscape;
- (d) Spaced to accommodate sight distance requirements for driveways and intersections; and
- (e) At least two inches caliper measured six inches above the ground line with a single-stem and minimum branch height of six feet.

(2) Interior Parking Lot Landscaping. To provide shade and visual relief, the interior of surface parking lots with 10 or more stalls shall be landscaped with at least one tree per six stalls.

(3) Buffers. Though the comprehensive plan is designed to minimize adjacent, incompatible land uses, such incompatibilities sometimes arise in detailed site planning. In these cases, a buffer (see DMC 25.10.020, B definitions) is required, as follows:

- (a) A moderate buffer shall be provided between parking lots and any adjacent public right-of-way.
- (b) In the process of reviewing development proposals, the city will require full, moderate, or light buffers as necessary to mitigate incompatibility, for example between residential and nonresidential development, or between an outdoor storage or trash receptacle area and surrounding high-use areas.

Staff Analysis and Conclusion: The proposal is not required to provide any street trees, parking strips or medians. Therefore subsection (1) Street Trees is not applicable. This proposal is not required to provide interior parking lot landscaping because the project includes less than 10 parking stalls, making subsection (2) Interior Parking Lot Landscaping not applicable. The proposal includes retention of existing significant vegetation along the perimeter between adjacent uses. The water treatment vessels will be partially obscured from rear yards by existing vegetation; however approximately 1/3 of the top of the vessel will be visible. Due to the height of the vessels, there is no additional buffering that could further obscure the new facilities and the height is less than the existing water tank. See the SEPA Determination for evaluation and mitigation of aesthetic impacts (Attachment 3c). The proposal is compliant.

c. DMC 25.90.040 Substantive requirements – Water conservation

The city encourages landscape design which requires minimal irrigation; and when irrigation is provided water conservation element shall be demonstrated.

Staff Analysis and Conclusion: The landscape plans indicate hydroseeding of disturbed areas which does not require irrigation. Therefore, DMC 25.90.040 is not applicable.

6. DMC 25.95 Off-street Parking

DMC 25.95 describes the quantity and design requirements for new parking.

Staff Analysis and Conclusion: The proposal does not generate a need for additional parking; therefore, it is not required to implement the measures in DMC 25.95.

7. DMC 25.105 Critical Areas

DMC 25.105 regulates critical areas within the city and established protective standards to minimize the impact of development to critical areas. Critical Areas that are regulated include wetlands, Fish and Wildlife Habitat Areas (such as streams), Geotechnical Hazard Areas, Aquifer Recharge Areas and Priority Habitats and Species.

The site is located in a township which is mapped for big brown bat (*Eptesicus fuscus*), little brown bat (*Myotis lucifugus*), and Yuma Myotis (*Myotis yumanensis*).

Staff Analysis and Conclusion: There are no wetlands or streams located on the subject property. The applicant submitted a geotechnical report that found negligible landslide risks on the site. There are no signs of unstable soil in the areas that construction will take place. The proposal does not remove any significant trees or vegetation that could provide habitat for the locally documented Priority Habitat and Species. The proposal will not impact critical areas and is compliant with DMC 25.105.

8. DMC 25.110 Street Corner Setbacks

On corner lots no building, structure, parking, sign, berm, planting, or other sight-obscuring object, other than traffic signs and utility poles, shall be erected, placed, or allowed to grow between the heights of three feet and eight feet above the street surface within the vision clearance triangle. The vision clearance triangle (see Figure 1) is that area enclosed on two sides by the intersecting public right-of-way lines and on the third by an imaginary line connecting those points on said right-of-way lines that are 30 feet from their point of intersection.

Staff Analysis and Conclusion: The site is not a corner lot. A turning movements figure demonstrating a large trucks ability to maneuver throughout the site is provided. The proposal is compliant.

9. DMC 25.115 Transportation Concurrency Review

Transportation Concurrency Review requires a concurrency test with regards to transportation impacts. Project requiring site plan review are also required to undergo Transportation Concurrency Review. Per DMC 26.115.020 the city shall not issue a development permit until the test has been conducted and a certificate of concurrency has been issued. Per DMC 25.115.949 the finding of concurrency may occur at the building permit application phase.

Staff Analysis and Conclusion: The proposal will not generate new vehicular trips and therefore is not required to undergo Transportation Concurrency Review. The proposal is compliant.

10. DMC 25.116 Sign Code

DMC 25.116 requires an application for sign permit.

Staff Analysis and Conclusion: A sign permit application was not submitted with the Site Plan Review application. If a new sign is needed, a sign permit application will be required demonstrating compliance with DMC 25.116. (Condition 2)

11. DMC 25.120 Tree Retention and Tree Modification (PLNG2022-26)

The purpose of this chapter is to protect natural habitats, air quality, and ground water recharge; improve the appearance of the community; provide shade and wind protection; reduce stormwater discharge; and conserve water supplies. This chapter is intended to help achieve these purposes by retaining trees, without reducing developmental densities from those indicated in the comprehensive plan. This chapter shall apply to street trees throughout the city and to all new development projects that require a site plan approval, subdivision, or short plat.

- a. DMC 25.120.030 (2) requires **all landmark Oregon white oak trees shall be retained**, along with any native understory within a protection zone one and one-half times the radius of the oak's canopy, **unless the landmark oaks are within a proposed street right-of-way** which is integral to the neighborhood and cannot reasonably be moved, or **unless overall neighborhood densities cannot be met**. In such cases, up to **30 percent of the landmark**

oak trees may be removed, when consistent with the standards in the table of DMC 25.120.040(1). **At least half of all other (non-oak) landmark trees shall be retained.**

Staff Analysis and Conclusion: All on-site trees will be retained. The tree types depicted in the vicinity of the work area are not Landmark trees. The proposal is compliant.

- b. DMC 25.120.030(3) requires the following minimum number of trees (other than street trees) per acre, expressed as an **average over the entire neighborhood plan**, site plan, subdivision, or short plat, shall be retained; provided, that **nothing in the following shall require the retention of more than half of the existing trees, other than oak**:
 - (b) Commercial, office, mixed, civic, and schools: **three per acre**
 - (c) Single-family and mixed single-family and multifamily areas: **four per acre**; **provided, that for multifamily uses, half of the required four retained trees per acre may be satisfied by installing new trees**; further provided, the cumulative diameter at breast height of the new trees equals that of the trees that would otherwise be retained but which are to be removed.

Staff Analysis and Conclusion: Based on the above section, this project would be considered a civic use, which requires 3 trees per acre to be retained, or 5 trees on the 1.77-acre site. The proposal is compliant, as no trees are proposed to be removed.

- c. DMC 25.120.030(5) requires **no clearing, grading, trenching, cutting, impervious surfacing, or other construction shall be allowed within the drip line of any tree to be retained**, or within one and one-half times the radius of the canopy in the case of oak trees to be retained, nor shall grades be lowered or raised so near as to jeopardize said trees; unless there is no other alternative and the intrusion is the minimum possible as determined by the administrator. Temporary barriers shall be installed around trees requiring protection during construction.

Staff Analysis and Conclusion: There are two 10- to 12-inch pine trees (non-Landmark trees) located adjacent to the chemical room expansion that may be impacted by construction as the proposal depicts grading within their tree protection radius. These trees are to be assessed by the City Arborist during and after construction who shall provide recommendations to ensure their long-term health. The code-required tree protection notes shall be placed on the construction drawings. No other grading, trenching, or other construction will occur within the dripline of any tree that will be retained. The proposal is compliant. (Conditions 3 and 4)

- d. **DMC 25.120.030(6)** requires that all landscape plans depict the location, size, and species of all landmark, historic and specimen trees, which are to be retained and how they will be protected during development.

Staff Analysis and Conclusion: – The provided landscape plans describe the location, size, and species of all existing trees that will be retained. However, no plan for protection during development is provided on these plans. Tree protection notes shall be added to the construction plans. (Condition 4)

- e. DMC 25.120.030(7) requires **a note be placed on the plat or site plan** as follows: “This plat is also subject to an approved tree retention plan which requires that certain trees be preserved. That plan, which is binding on all owners, is on file with the City Planning Department.”

Staff Analysis and Conclusion: The Landscape Plan states that there are no significant on-site trees within project limits, therefore a tree retention plan is not needed. This section is not applicable.

- f. DMC 25.120.040 Oak management mapping units, requires certain Oregon white oak groves to be mapped and provides specific requirements for each mapping unit.

Staff Analysis and Conclusion: There are no oak management mapping units in the vicinity of the site, therefore chapter DMC 25.120.040 is not applicable.

12. DMC 25.125 Wireless Communication Facilities

Chapter 25.125 provides standards for wireless communications facilities.

Staff Analysis and Conclusion: The proposal does not contain a request for a wireless communication facility. Chapter 25.125 is not applicable.

13. DMC 25.150 Site Plan Approval

DMC 25.20.060 (12) requires site plan approval as set forth in DMC 25.150 as a Type II procedure. Per DMC 25.150.030, in order to obtain site plan approval, all of the development regulations and criteria specified in the district applicable to the property must be satisfied in addition to any general development requirements in Chapters 25.75 through 25.95 and 25.105 through 25.125 DMC.

Staff Analysis and Conclusion: As evaluated within this Report, the proposal is compliant with the requirements set forth in DMC 25.150.

ENGINEERING DEPARTMENT REVIEW

The City Engineer has reviewed the application and no comments were provided.

FIRE DEPARTMENT REVIEW

The City Fire Marshal has reviewed the application and no comments were provided

BUILDING DEPARTMENT REVIEW

The City Building Official has reviewed the application and no comments were provided

CONCLUSIONS

In accordance with the criteria in DMC 25.175.040, staff has evaluated the project and finds that, subject to the recommended conditions below, the proposal is consistent the DMC and existing ordinances concerning public utilities, traffic, facilities, and services, and provides access, landscaping, screening, building placement, parking lot layout, and protection of sensitive areas, subject to the recommended conditions of approval provided in Section I, below. As demonstrated in the Consistency Analysis, the proposal meets the criteria for approval.

RECOMMENDATION

Based on the findings and conclusions in this report, Staff recommends approval of the Site Plan subject to the conditions provided in Section I:

1. Compliance with the SEPA DNS issued April 21, 2023 is required (Attachment 3c).
2. If a new sign is needed, a sign permit application will be required demonstrating compliance with DMC 25.116.
3. The pine trees adjacent to the chemical room expansion area are to be assessed by the City Arborist during and after construction, who shall provide recommendations to ensure their long-term health. This note shall be added to the construction drawings.
4. The following code requirement shall be added to the construction drawings:

"No clearing, grading, trenching, cutting, impervious surfacing, or other construction shall be allowed within the drip line of any tree to be retained, or within one and one-half times the radius of the canopy in the case of oak trees to be retained, nor shall grades be lowered or raised so near as to jeopardize said trees; unless there is no other alternative and the intrusion is the minimum possible as determined by the administrator. Temporary barriers shall be installed around trees requiring protection during construction.

DECISION

Based on the Findings and Analysis summarized above, the City finds that the proposal, as conditioned, is consistent with the Comprehensive Plan and DMC Title 25.41, 25.75 through 25.95, 25.105 through 25.125, and 25.130. The City has determined that the proposal meets the standards and criteria necessary to obtain approval by the City. All conditions included in the Recommendation are incorporated herein with this Approval.

Barbara Kincaid

Date

APPEALS

Consistent with DMC 25.175.060(4), this decision by the director may be appealed to the City hearing examiner. Only parties of record may file an administrative appeal. An appeal must be filed within 14 days after issuance of this decision (by 5:00 p.m. on May 5, 2023). The instructions for filing an appeal are found in DMC 25.175.060(4). Appeals shall be in writing, be accompanied by the required appeal fee and contain the information detailed in DMC 25.175.060(4)(d).

ATTACHMENTS (SUMMARY OF RECORD)

1. The following plans and documents were submitted for City review on October 31, 2022.
 - (a) Pre-application meeting response letter with comments dated October 28, 2022
 - (b) Land use Application dated October 31, 2022
 - (c) Cultural Resources Report Technical Memo dated April 15, 2021
 - (d) Geotechnical Supplemental Report dated June 2, 2022
 - (e) Conditional Use Permit Application dated October 31, 2022
 - (f) Noise Memo dated October 27, 2022
 - (g) Renderings of Carbon Vessels (painted green) dated October 31, 2022
 - (h) Renderings of neighbor view of green vessels dated October 31, 2022
 - (i) Storm Memo dated October 28, 2022
 - (j) Renderings of Carbon Vessels (painted white) dated October 31, 2022
 - (k) Vicinity Map dated March 14, 2022
 - (l) SEPA checklist dated October 31, 2022
