

### ***Do Not Plant List***

| <b>Common Name</b>                  | <b>Botanical Name</b>                                                                                     | <b>Concern</b>                                                                             |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| <b>American Elm</b>                 | <i>Ulmus americana</i> cultivars                                                                          | Shallow root growth & prone to canopy structural failures                                  |
| <b>Aspen</b>                        | <i>Populus</i> cultivars                                                                                  | Shallow root growth & invasive                                                             |
| <b>Green Ash</b>                    | <i>Fraxinus pennsylvanica</i> cultivars                                                                   | Shallow root growth & susceptible to Emerald Ash Borer (EAB)                               |
| <b>White Ash</b>                    | <i>Fraxinus americana</i> cultivars                                                                       | Shallow root growth & susceptible to Emerald Ash Borer                                     |
| <b>Callery Pear</b>                 | <i>Pyrus calleryana</i> cultivars                                                                         | Shallow root growth, prone to canopy structural failures & invasive                        |
| <b>Norway Maple</b>                 | <i>Acer platanoides</i> cultivars                                                                         | Shallow root growth                                                                        |
| <b>Sycamore Maple</b>               | <i>Acer pseudoplatanus</i>                                                                                | Shallow root growth & highly invasive                                                      |
| <b>Red Maple</b>                    | <i>Acer rubrum</i> cultivars                                                                              | Shallow root growth & susceptible to disease                                               |
| <b>Linden</b>                       | <i>Tilia</i> spp./cultivars                                                                               | Shallow root growth & aphid infestation (honeydew)                                         |
| <b>Zelkova</b>                      | <i>Zelkova serrata</i> (Green Vase, Village Green, Schmidtlow, Musashino)                                 | Shallow root growth                                                                        |
| <b>Katsura</b>                      | <i>Cercidiphyllum japonicum</i>                                                                           | Shallow root growth & easily water stressed                                                |
| <b>Purple Leaf Plum</b>             | <i>Prunus cerasifera</i> cultivars                                                                        | Shallow root growth, insect & disease susceptibility, prone to structural crown failures   |
| <b>Ornamental / Japanese Cherry</b> | <i>Prunus</i> spp./cultivars                                                                              | Shallow root growth, insect & disease susceptibility                                       |
| <b>Birch</b>                        | <i>Betula jacquemontii</i> , <i>papyrifera</i> , <i>pendula</i> , <i>populifolia</i> , <i>platyphylla</i> | Shallow root growth, easily water stressed, aphid and bronze birch bark borer infestations |
| <b>Paul's Scarlet Hawthorn</b>      | <i>Crataegus laevigata</i> 'Paul's Scarlet'                                                               | Highly susceptible to leaf blight                                                          |
| <b>Tulip Tree</b>                   | <i>Liriodendron tulipifera</i> cultivars                                                                  | Shallow root growth & aphid infestation (honeydew)                                         |
| <b>London Planetree</b>             | <i>Platanus x acerifolia</i> cultivars                                                                    | Shallow root growth - allergies                                                            |
| <b>European Mt. Ash</b>             | <i>Sorbus</i> spp. Cultivars (except <i>Sorbus americana</i> )                                            | Shallow root growth and susceptible to diseases                                            |
| <b>Chinese Pistache</b>             | <i>Pistacia chinensis</i>                                                                                 | Shallow root growth                                                                        |
| <b>Willow</b>                       | <i>Salix</i> spp. Cultivars                                                                               | Shallow root growth & susceptible to disease                                               |
|                                     |                                                                                                           |                                                                                            |
